

CCIE DATA CENTER LAB WORKBOOK

www.netmetric-solutions.com

Table of Contents

LAB 1: VIRTUAL DEVICE CONTEXT	9
<i>Task 1: Check basic information of N7K</i>	<i>9</i>
<i>Task 2: Create a Non-Default VDC.....</i>	<i>11</i>
<i>Task 3: Allocate interfaces to the vdc.....</i>	<i>11</i>
<i>Task 4: Change the CPU-share and boot-order for the vdc</i>	<i>11</i>
<i>Task 5: Create a new resource template</i>	<i>12</i>
<i>Task 6: Assign the mgmt IP address to the vdc.....</i>	<i>12</i>
<i>Task 7: Create local users and check access</i>	<i>13</i>
LAB 2: VIRTUAL PORT-CHANNEL.....	14
<i>Task 1: Nexus 9K Virtual Port-Channel.....</i>	<i>14</i>
<i>Task 2: Nexus 9K Virtual Port-Channel with L3 Routed Keep-Alive Link.</i>	<i>17</i>
<i>Task 3: Nexus 9K vPC using SVI Keep-Alive.....</i>	<i>22</i>
<i>Task 4: vPC with HSRP (Peer-Gateway)</i>	<i>25</i>
<i>Task 5: vPC Peer-switch</i>	<i>30</i>
<i>Task 5: Dual-Sided vPC.....</i>	<i>36</i>
<i>Task 6: ARP synchronization and Delay-Restore</i>	<i>42</i>
LAB 3: VIRTUAL EXTENSIBLE LAN	47
<i>Task 1: Same VLAN, Same VNI, Same Subnet, Same Mcast-group.....</i>	<i>47</i>
<i>Task 2: Same VLAN, Same VNI, Different Subnet, Same Mcast-group... </i>	<i>59</i>
<i>Task 3: Different VLAN, Same VNI, Different Subnet, Same Mcast-group</i>	<i>62</i>
<i>Task 4: Different VLAN, Different VNID, Different Subnet, Same Mcast-group.....</i>	<i>65</i>

<i>Task 5: Different VLAN, Different VNID, Different Subnet, Different Mcast-group on both VTEPs</i>	71
<i>Task 6: Different VLAN, Different VNID, Different Subnet, Different Mcast-group (Between VTEPs)</i>	75
<i>Task 7: Extending L2 Bridging using BGP-eVPN.</i>	82
<i>Task 8: Extending L2 Bridging using BGP-eVPN and establishing Inter-VNI connectivity using IRB (Bridge-Route-Bridge).....</i>	86
<i>Task 9: Inter-VNI routing using L3 VNI and BGP-eVPN.....</i>	90
<i>Task 10: vPC with VXLAN in L3 BGP-eVPN.....</i>	100
<i>Task 11: vPC with VXLAN in Flood & Learn.....</i>	103
<i>Task 12: vPC with VXLAN and Anycast Gateway with BGP-eVPN.</i>	109
LAB 4: Storage and Unified Computing System	116
<i>Task 1: Discovering compute devices and chassis</i>	116
<i>Task 2: Understanding and configuring UCS Infrastructure Connectivity</i>	121
<i>Task 3: Configuring UCS Global Policies</i>	125
<i>Task 4: Configuring VLANs and VSANs</i>	131
<i>Task 5: Configuring Resource Pools in UCS.....</i>	134
<i>Task 6: Converting Interfaces on FI</i>	140
<i>Task 7: Configuring Uplink Port-channels.....</i>	145
<i>Task 8: Creating VLAN-GROUPs.....</i>	150
<i>Task 9: Configuring NTP on UCS</i>	155
<i>Task 10: Creating Policies</i>	157
○ Network Control Policy	157
○ Local-Disk Configuration Policy.....	158
○ LACP Policy	160
○ Storage Profile.....	162

○ Storage Policy.....	163
○ Multicast Policy	165
○ vNIC Template.....	167
○ LAN Connectivity Policy	169
○ QoS Policy	172
○ vHBA Template	173
○ SAN Connectivity Policy	174
○ vMedia Policy	177
<i>Task 11: Converting Interfaces to FC on 5K</i>	179
<i>Task 12: Configuring VSANs and Zone Distributions</i>	181
<i>Task 13: Configuring FCoE on 5K</i>	186
<i>Task 14: Checking FLOGI Database</i>	189
<i>Task 15: Creating Boot Policies</i>	191
<i>Task 16: Creating Service Profile Template</i>	194
<i>Task 17: Creating Service Profile</i>	196
<i>Task 18: Configure Boot from SAN</i>	206
<i>Task 19: Configuring Appliance VLANs</i>	213
<i>Task 20: Creating Overlay vNIC and Booting using iSCSI</i>	217
LAB 5: Application Centric Infrastructure	224
<i>Task 1: ACI Fabric Initialization</i>	224
<i>Task 2: Configuring VLAN Pools</i>	228
<i>Task 3: Configuring Physical and External Domains</i>	230
<i>Task 4: Configuring Interface policies for Leafs and Spines</i>	233
<i>Task 5: Creating Interface Policy Group</i>	235
<i>Task 6: Configuring Interface Profiles</i>	239
○ Leaf Profile	239
○ vPC Interface Profile	241

○ FEX Profile	243
○ FEX Interface Profile.....	245
<i>Task 7: Creating Switch Profile</i>	248
<i>Task 8: Bare-Metal Host Communication.....</i>	250
<i>Task 9: VMM Integration.....</i>	256
<i>Task 10: Intra-Tenant Communication.....</i>	259
<i>Task 11: Inter-Tenant Communication.....</i>	275
<i>Task 12: ASA_v Integration in Transparent Mode.....</i>	296
<i>Task 13: ASA_v Integration in Routed Mode</i>	324
<i>Task 14: L3Out OSPF Communication</i>	352
<i>Task 15: L3Out BGP Communication.....</i>	382
<i>Task 16: L2 Extension using OTV</i>	401
<i>Task 17: Configuring OOB Contracts for Fabric Management.....</i>	430
<i>Task 18: Configuring ACI fabric as DHCP Relay Agent.....</i>	437
<i>Task 19: Configuring Monitoring Sessions in ACI</i>	440
<i>Task 20: Configure ACI for Transit-Routing</i>	444
<i>Task 21: Configuring Loop-prevention Mechanism, BPDU Guard, End-Point Movement, End-point Retention Policy, IP Aging Policy/GARP. .</i>	456
<i>Task 22: Configuring Security Policies in ACI.</i>	470
○ AAA.....	470
○ LDAP	475
○ RADIUS	481

Lab Guidelines

The following scenarios are practice labs designed to test your readiness for the Cisco Systems CCIE Data Center Lab Exam. However, remember that, these practice labs should be used as a learning tool. Instead of rushing through the labs to complete all the configuration steps, take the time to research the networking technology and gain a deeper understanding of the principles behind its operation. For each lab of the CCIE Data Center Practice Labs Workbook, follow these guidelines:

- Read the entire lab scenario before starting the configuration, and correlate tasks within a section to get a complete overview of the lab
- ~~dependencies~~ between tasks of the same section and between tasks from different sections. Carefully read throughout the lab to identify and make notes of it
- Some tasks present a set of requirements for implementing a technology, and some tasks present outputs to be matched.
- Labs include both configuration and troubleshooting tasks; the number of faults relevant to each troubleshooting task may or not be specified.
- Before starting the lab, verify that all equipment is functional, powered up and that you can access it at the console.
- Devices are preconfigured, do not change it unless specifically allowed by the task. On troubleshooting tickets, you may change any of the initial configurations.
- IPv4/IPv6 static and default routes are allowed to complete any task, but only if this is the only available option, and unless otherwise stated in any task.
- Make sure you do not to lock yourself out of any device, because password recovery or device reset is not available in the lab.
- At the end of the Lab, ensure that all devices are accessible at the console by using preconfigured credentials or the ones from specific task requirements.
- Lab Instructions

Before you begin, make sure that the initial configuration scripts for each lab have been applied. If you have any questions related to the scenario solutions, send an email to our support team at techlabs@netmetric-solutions.com.

Refer to the attached physical and logical diagrams on each lab for interface and protocol assignments. Upon lab completion, end-to-end IPv4 connectivity is not a requirement unless specifically asked for, but you are required to meet task requirements and restrictions

Lab Restrictions

Each lab scenario contains explicit general restrictions that you must conform to while configuring the lab. These restrictions are defined in the introductory section for each scenario. Examples of such restrictions include, but are not limited to, not adding additional IP addressing, not changing the default authentication methods, etc. There may also be certain restrictions for particular tasks within a lab scenario. Examples of these restrictions include, but are not limited to, not issuing a particular configuration command, not using the legacy configuration for a technology, etc.

TIP

You may do whatever is necessary to complete a task unless the general requirements for the lab scenario or the specific requirements for the task explicitly prohibit you from doing so. All devices are accessible at the console without requiring any authentication; do not change this. To access other devices within the lab, use the following tables as a reference:

REFERENCE SHEET

Device	IP	Username	Password

```

Software

```
BIOS:    version 2.12.0
kickstart: version 7.3(1)D1(1)
system:   version 7.3(1)D1(1)
BIOS compile time:  05/29/2013
kickstart image file is: bootflash:///n7000-s2-kickstart.7.3.1.D1.1.bin
kickstart compile time: 9/9/2016 23:00:00 [09/10/2016 02:59:14]
system image file is:  bootflash:///n7000-s2-dk9.7.3.1.D1.1.bin
system compile time:  9/9/2016 23:00:00 [09/10/2016 04:28:21]
```

Hardware

```
cisco Nexus7000 C7004 (4 Slot) Chassis ("Supervisor Module-2")
Intel(R) Xeon(R) CPU        with 32940112 kB of memory.
Processor Board ID JAF1849AEAK
```

```
Device name: ADMIN
bootflash: 2007040 kB
slot0:      0 kB (expansion flash)
```

Kernel uptime is 0 day(s), 3 hour(s), 58 minute(s), 56 second(s)

Last reset at 662410 usecs after Tue Jul 23 09:44:59 2019

```
Reason: Reset Requested by CLI command reload
System version: 7.3(1)D1(1)
Service:
```

Plugin

⇒ Check the modules inserted on the device.

```
ADMIN(config)#show module
```

Mod	Ports	Module-Type
1	0	Supervisor Module-2
3	48	1/10 Gbps Ethernet Module
4	48	10/100/1000 Mbps Ethernet XL Module

Model	Status
N7K-SUP2E	active *
N7K-F248XP-25E	ok
N7K-M148GT-11L	ok

Mod	Sw	Hw
1	7.3(1)D1(1)	6.1
3	7.3(1)D1(1)	1.2
4	7.3(1)D1(1)	1.2

Mod	MAC-Address(es)
1	50-87-89-4d-5b-c1 to 50-87-89-4d-5b-d3
3	50-87-89-4d-db-50 to 50-87-89-4d-db-83
4	f4-cf-e2-ac-1f-0c to f4-cf-e2-ac-1f-3f

Serial-Num
JAF1849AEAK
JAF1851AHFL
JAF1852ANTF

Mod	Online Diag Status
1	Pass
3	Pass
4	Pass

⇒ Check the number of VDCs created on the device

```
ADMIN(config)#show vdc
```

vdc_id	vdc_name	state	mac	type	lc
1	ADMIN	active	50:87:89:48:10:41	Admin	None
2	dc1-7k-1	active	50:87:89:48:10:42	Ethernet	m1 m1xl m2xl f2e
3	dc1-7k-2	active	50:87:89:48:10:43	Ethernet	m1 m1xl m2xl f2e
4	dc1-7k-3	active	50:87:89:48:10:44	Ethernet	m1 m1xl m2xl f2e
5	dc1-7k-4	active	50:87:89:48:10:45	Ethernet	m1 m1xl m2xl f2e
6	dc2-7k-1	active	50:87:89:48:10:46	Ethernet	m1 m1xl m2xl f2e
7	dc2-7k-2	active	50:87:89:48:10:47	Ethernet	m1 m1xl m2xl f2e
8	dc2-7k-3	active	50:87:89:48:10:48	Ethernet	m1 m1xl m2xl f2e
9	dc2-7k-4	active	50:87:89:48:10:49	Ethernet	m1 m1xl m2xl f2e

⇒ If the number of VDCs has maxed out, you can delete a VDC.

```
ADMIN(config)#no vdc dc2-7k-4
Deleting this vdc will remove its config. Continue deleting this vdc (y/n)? [no] y
Note: Deleting VDC, Files under bootflash:/vdc_9/* will be deleted! One moment please ...
ADMIN(config)#

```

Task 2: Create a Non-Default VDC

⇒ Create a non-default VDC with name 'Netmetric-Test'

```
ADMIN(config)#vdc Netmetric-Test
Note: Creating VDC, one moment please ...
ADMIN(config-vdc)#

```

Task 3: Allocate interfaces to the vdc

⇒ Allocate int e3/25 and e4/40 to the created VDC.

```
ADMIN(config)#vdc Netmetric-Test
ADMIN(config-vdc)#allocate int e3/25, e4/40
Entire port-group is not present in the command. Missing ports will be included automatically
Additional interfaces included are:
Ethernet 3/26
Ethernet 3/27
Ethernet 3/28
Moving ports will cause all config associated to them in the source vdc to be removed. Are you sure you
want to move the ports (y/n)? [yes]

```

Verify

```
ADMIN(config)#show vdc membership
```

Task 4: Change the CPU-share and boot-order for the vdc

⇒ Change the CPU-Share of the created VDC to 10. Also, change the boot-order

```
ADMIN(config)#vdc Netmetric-Test
ADMIN(config-vdc)#cpu-share ?
<1-10> Priority of this vdc. Control cpu time during periods of contention
ADMIN(config-vdc)#cpu-share 10
ADMIN(config-vdc)#boot-order ?
<1-9> The order at which a vdc will boot up. VDCs at the same level will be started parallelly
ADMIN(config-vdc)#boot-order 4

```

Verify

```
ADMIN(config)#show netmetric-test detail
```

Task 5: Create a new resource template

⇒ Create a new resource template with name ‘temp’ and assign it to the created vdc. Make sure the following changes are made to the resource template:

- Set the limits for VLANs with range 16-25.
- Set the max limit equal to the minimum limit of 5 on the number of Port-channels.

```
ADMIN(config)#vdc resource template temp
ADMIN(config-vdc-template)#limit-resource vlan min 16 max 25
ADMIN(config-vdc-template)#limit-resource port-channel min 5 max equal-to-min
ADMIN(config-vdc-template)#ex
ADMIN(config)#vdc netmetric-test
ADMIN(config-vdc)#template temp
```

Verify

```
Netmetric-Test(config)#show resource
```

Task 6: Assign the mgmt IP address to the vdc.

⇒ Assign the Mgmt IP 20.0.0.179/24 to the VDC.

```
Netmetric-Test(config)#int mgmt 0
Netmetric-Test(config)#ip address 20.0.0.179/24
Netmetric-Test(config)#no shut
```

Verify

```
Netmetric-Test(config)#show int brief
```

Task 7: Create local users and check access

- ⇒ Create a user ‘User1’ with read-write access to the admin VDC but not the non-default VDCs.
- ⇒ Create a user ‘User2’ with read access to the admin VDC but not the non-default VDCs.
- ⇒ Create a user ‘User3’ with read-write access to the created non-default VDC.
- ⇒ Create a user ‘User4’ with read access to the created non-default VDC.

Note : Use any password of your choice for the above task.

```
ADMIN(config)#username User1 password Sanfran1234 role network-admin
ADMIN(config)#username User2 password Sanfran1234 role network-operator
ADMIN(config)#show user-account
```

```
Netmetric-Test(config)#username User3 password Sanfran1234 role vdc-admin
Netmetric-Test (config)#username User4 password Sanfran1234 role vdc-operator
Netmetric-Test (config)#show user-account
```
